This is part of a multi-step process to design a finalized website:

1. Starting with the wireframe concept
2. Creating a navigation structure
3. Creating the layout
4. Creating the presentation and messaging
5. Creating the assets/images/context

PART 01:

Create a wireframe concept on paper for the following:

1. A hypothetical website for all the courses you are currently taking
2. The website should link to (in no particular order):
   a. Sections that identify each individual course
   b. Your email
   c. The program course content site
   d. Sheridan's Main site
   e. Your own blog/portfolio
   f. Your social media content
3. Identify navigational elements and the hierarchy
4. Revisit that you have not missed any requirement
5. An area designated for a banner (your personal branding)

PART 02:

In Photoshop, using the GRID as a base, create boxes for the necessary elements identified in *Part 01* using design principles of:

• Rule of Thirds

• Proximity

• Alignment

• Repetition

NOTE: Each major section of the preliminary layout should be in its own **Folder** with design elements in the folder for portability. Using Photoshop Folders will help streamline workflow.
